# TimeLine View

Playlist views for monitoring and editing multi-channel systems, with a legacy feel that your operators know and love.

TimeLine View gives you access to high-level monitoring combined with dynamic features for a fast paced environment.

Overview:

- Monitor multiple channels at a high level via web browser. Access from anywhere on your network.

- **(1)** Event Details at-a-glance: includes media warnings, event comments, secondary events, event start/end methods and more.

- **(2)** Filter View helps users track complete schedule needs: media/device error summary, scheduled start time reviews, manual user actions needed, all while interactively cycling through events on the timeline.

- **(3)** Integrated Grid View gives full playlist view and control for selected channel. No need to switch between applications.

- Dynamic Gang Roll – fast and dynamic feature for multiple channels, configurable on the fly by your operators.

- User Access Privileges and controls that you control.

TimeLine View is part of Crispin's Core suite of products, which are more than just web based "legacy" product replacements. Core includes new and additional features in order to make operating your channel(s) even more efficient.
